P R O F I L E

With an extensive 11-year background in iOS development, I specialize in utilizing XCode, SwiftUI, Swift, and Objective-C to craft user-friendly applications.

Beyond iOS, I am enthusiastic about exploring the potential of Flutter and React.js in frontend development, seeking opportunities to enhance projects and foster effective collaboration for successful outcomes.

- Design and build advanced applications for the iOS platform.
- Collaborate with cross-functional teams to define, design, and ship new features.
- Work on bug fixing and improving application performance.
- Follow coding standards, best practices, and guidelines.
- Research and propose new technologies and approaches to improve existing applications or build new ones.
- Conduct code reviews to ensure code quality, maintainability, and adherence to coding standards.
- Share knowledge and expertise with the team to foster a culture of continuous learning and improvement.
- Write unit tests to identify malfunctions.
- Manage the deployment process to the App Store, including provisioning profiles, certificates, and app store submissions.

PROJECT

RentIT - Nexer Group

A dedicated lending app exclusively for Nexer Group employees, with a focus on fostering a culture of collaboration and trust. The app incorporates user-friendly features such as item listings, notifications, and reviews, streamlining the process of borrowing and lending among colleagues.

I am responsible for shaping the app's architecture, prioritizing tasks, and ensuring to meet our timelines. I actively collaborate with cross-functional teams to drive progress.

I conduct thorough code reviews to uphold the quality of our code repository. My approach is grounded in agility, and I've accomplished the development of key features, including product posting, listing, reviews, and app store management.

Skill Used:

SwiftUI, Swift, XCode, MVVM, Agile, XCTest, SOLID, Combine, Async/Await, SPM, Push Notifications

Drone Finder – Nexer India

DroneFinder, a specialized application dedicated to supporting rescue teams in their critical missions. Tailored for DJI Drones, this app harnesses advanced machine learning technology to capture and analyze images taken by the drone, enabling rapid victim detection.

My role encompassed a wide range of tasks, from constructing the app's user interface to integrating the DJI SDK and implementing RESTful API connections for seamless communication with the backend server, all accomplished using the native iOS SDK. I handled responsibilities from development through deployment, ensuring effective communication with the customer.

I also utilized XCode Instruments to optimize app performance and made efficient use of Azure DevOps for source code management, employing Boards for streamlined project oversight and management.

Skill Used:

Swift, XCode, DJI SDK, MVVM, Agile, XCTest, Combine, SPM, Instruments, Firebase

MOBILE APP DEVELOPER

PROJECT

Stockal - Stock market Integelligence app

Stockal, an indispensable tool for US stock market investors. This app provides comprehensive stock intelligence, offering historical data, company performance insights, and future analysis.

As the iOS lead on the project, I played a pivotal role in designing, implementing the solution and collaborating with a skilled team of developers.

Moreover, my collaboration extended to close work with the CTO and CEO, where I actively contributed to idea generation, established project timelines, and assisted in shaping the Minimum Viable Product (MVP) to align with Stockal's vision and goals.

Skill Used:

Objective C, XCode, TradeIt SDK, MVC, Agile, XCTest, SOLID, Cocoapods, UIKit

Daresay-Showcase Web Application

Designed and developed daresay showcase web application using React.js, facilitating the elegant presentation of client projects on office TV screens powered by Raspberry Pi. Implemented a user-friendly daresay showcase CMS to streamline project management processes, empowering users with efficient content control capabilities.

Skill Used:

HTML, CSS, Javascript, React.js, Hooks, Redux, Figma, TCA

WorkZen

Developed the WorkZen Application using Flutter, focusing on improving workplace well-being through customizable break reminders, posture improvement, and guided body stretches. Designed to refresh the mind and promote better physical health, the app offers tailored features to enhance individual well-being during work hours.

Skill Used:

Dart, BLoC, Awesome Notifiations, Widget, Android Studiio, Flutter, Figma
